Gamma-ray Coordinates Network

2

Realtime Alerts Born of Necessity

• The Compton Gamma-Ray Observatory's onboard recorder failed in 1992 • The need to downlink events as they occurred created an opportunity for realtime follow-up BAtse COordinates **Distribution NEtwork** (BACODINE) was built to receive and distribute those alerts worldwide

Early History of GCN

- BACODINE provided new alert formats (phone, email, socket, and pager)
- New instruments and transient types led to the Gamma-ray Coordinates Network

t, and pager) Coordinates Network

GCN Enabled Seminal Breakthroughs in Astrophysics

The GCN community enabled worldwide followup observations that revealed the nature of gamma-ray bursts:

- Afterglows and redshifts confirmed their distant, extragalactic origin
- Supernova-GRBs established massive stellar deaths as the cause of long GRBs
- Afterglow and host studies established neutron star mergers as the cause of short GRBs

There are two kinds of GCN data products: **GCN NOTICES GCN CIRCULARS**

TITLE:	GCN/FERMI NOTICE
NOTICE DATE:	Wed 26 Aug 20 22:10:07 UT
NOTICE TYPE:	Fermi-GBM Flight Position

TITLE: GCN CIRCULAR NUMBER: 28298

20/08/27 21:10:30 GMT Christian Malacaria at NASA-MSFC/USRA <cmalacaria@usra.edu>

SUBJECT: GRB 200826B: Fermi GBM detection DATE: FROM: C. Malacaria (NASA-MSFC/USRA) and C.Meegan (UAH) report on behalf of the Fermi GBM Team: "At 22:09:42.72 UT on 26 August 2020, the Fermi Gamma-Ray Burst Monitor (GBM) triggered and located GRB 200826B (trigger 620172587 / 200826923). The on-ground calculated location, using the GBM trigger data, was reported in GCN 28292. The GBM light curve shows an exceptionally bright long GRB with a duration (T90) of about 7.4 s (50-300 keV). The time-averaged spectrum from T0-0.003 s to T0+ 12.544 s is best fit by a Band function with Epeak = 410.3 +/- 5.6 keV, alpha = -0.64 + - 0.01, and beta = -2.52 + - 0.04The event fluence (10-1000 keV) in this time interval is $(1.414 + - 0.006)E - 04 erg/cm^{2}$. The 1.024-sec peak photon flux measured starting from T0+5.1 s in the 10-1000 keV band is 110.1 +/- 0.7 ph/s/cm^2. The spectral analysis results presented above are preliminary; final results will be published in the GBM GRB Catalog: https://heasarc.gsfc.nasa.gov/W3Browse/fermi/fermigbrst.html For Fermi GBM data and info, please visit the official Fermi GBM Support Page:

https://fermi.gsfc.nasa.gov/ssc/data/access/gbm/"

By and for humans (some automated) • Freeform text (with established style) • Citable (but not peer-reviewed)

The Changing Scientific Landscape

GCN is constantly evolving to serve new transients, messengers, and observatories:

- Gravitational wave events (GW150914, GW170817)
- High-energy neutrinos (IC170922A)
- Tidal disruption events (Swift J1644+57)
- Magnetar giant flares (200415A)

(IC170922A) (Swift J1644+57) 200415A)

and observatories (G)/(15001)

The Changing Technological Landscape

Rubin Observatory/NSF/AURA

- Internet standards have led to new, better ways to serialize astronomy data (VOEvent, JSON, Avro, etc.)
- Encryption is necessary on the modern Internet (e.g. https)
- Industry has developed general time-series databases and streaming frameworks
- The Vera C. Rubin Observatory will use Apache Kafka to distribute transient alerts as its primary data product
- Many other experiments are following suit: Zwicky Transient Facility, LIGO/Virgo/KAGRA

Introducing the new GCN

9

The New GCN is built on Kafka

- GCN Classic provides three formats over three custom protocols

 - over one standard protocol: Apache Kafka
- GCN Classic over Kafka
 - provides all three formats

Kafka is widely used at NASA

- Existing Kafka applications at NASA include:
 - GCN (Goddard Space Flight Center)
 - Complex Event Processor Deep Space Network (Jet Propulsion Laboratory)
 - Enterprise Business Information Services (Jet Propulsion Laboratory)
 - Federated Airspace Management Framework (Ames Research Center)
- ...plus many other applications in other Federal agencies
- All Federal agencies are using self-managed Kafka brokers, either Apache Kafka or **Confluent Platform**
- GCN is sponsoring FedRAMP authorization for Confluent Cloud to make it easy for NASA and other federal agencies to deploy Kafka software-as-a-service

What is special about GCN's Kafka cluster?

It's special because it's so ordinary! It's a plain 3-broker Kafka cluster

- No custom auth extensions to side-load into the server
- No vendor lock-in: we use Confluent Platform, but we could use open-source Apache Kafka or fully managed solutions like Confluent Cloud or Amazon MSK

We use standard OpenID Connect (OIDC) for single sign-on

- We use Amazon Cognito, one of many off-the-shelf OIDC auth solutions
- We use the same auth system across our web site and our Kafka broker
- We have a straightforward path to adopting SciTokens (an HPC single sign-on infrastructure based on OpenID Connect, adopted by LIGO)

The General Coordinates Network (GCN) is a public collaboration platform run by NASA for the astronomy research community to share alerts and rapid communications about high-energy, multimessenger, and transient phenomena. For more information, see What is GCN? or check out our slide deck

There are three ways to stream GCN Notices in real time:

- Updated look and feel
- Single sign on with:
 - email and password
 - Google
 - Facebook
 - LaunchPad (for NASA)

New GCN web site

- at https://gcn.nasa.gov
- More accessible, based on
 - US Web Design System

employees and affiliates)

Start streaming GCN Notices

at https://gcn.nasa.gov/quickstart

- LIGO/Virgo/KAGRA*, IceCube, +many more
- Start streaming GCN noticices in seconds! Receive alerts from Fermi, Swift, • Use our "quick start" interface to:
- - Sign in / sign up
 - Create API credentials
 - Customize your alerts
 - Generate Kafka client code for your favorite language
 - (Python, JS, C++, C#, ...)

New JSON alerts over Kafka

Several missions and experiments are starting to send us alerts in JSON.

- LIGO, Virgo and KAGRA are publishing JSON records to GCN a Kafka topic called
 - igwn.gwalert.
 - Classic notice types (VOEvent, text, binary) still supported
 - See LIGO/Virgo/KAGRA Public Alerts User Guide for details

New and improved:

What's next for GCN?

19

Coming soon to GCN Circulars

We're planning lots of enhancements soon to make GCN Circulars even better:

- Receive Circulars over Kafka
- Real-time integration with SAO/NASA Astrophysics Data Service (ADS)
- Link multiple emails with your account
- Link your ORCID to your account
- DOIs and BiBTeX entries for all Circulars
- Browse Circulars by event
- Embed tables, coordinates, images, and styled text in Circulars with "Astro Flavored Markdown"

More enhancements are coming to GCN:

- New alert types and alerts from new missions and facilities
- Unified schema and alert format for GCN Kafka
- Integrated, searchable database of Notices and Circulars (GCN Viewer)
- Interoperability with other transient Kafka brokers (e.g. SCIMMA)

CN Viewer) IMA)

New Notice Producers

Road Map

Frequently Asked Questions

New Notice Producers

The following steps guide new instrument, mission, or observatory producers into setting up new notices streams that are distributed to the user community via Kafka. This process requires interaction with the GCN Team I to enable accounts and Kafka topics creation on the GCN Kafka broker. The GCN Team is also happy to work with the mission teams to help construct your alerts.

Start Producing Alerts

(1) Sign in / Sign up

2

Decide which of your team members will have programmatic access to produce your alerts. Make sure that they have all signed in at least once to the GCN website 2 and the GCN test website 2.

Name Your Kafka Topics

Names of Kafka topics follow the format *mission.notice type*. Pick a prefix for your Kafka topic names, mission.*.

3 **Contact the GCN Team**

Send the GCN Team Ø your list of team members from Step 1 and your chosen Kafka topic prefix from Step 2. The GCN Team will reply after they have configured producer permissions for your team.

Build Producer Code

- Log out and log back in.
- Go through the Start Streaming GCN Notices process.
- On Step 2, choose the scope gcn.nasa.gov/kafka-missionproducer.

Create new Notice types

- All new notice topics will only be distributed by GCN Kafka
- See step-by-step instructions
- Preferred notice format is JSON

Unified JSON schema in development

Unified schema and alert format for GCN Kafka

- JSON schema with common core fields
- Instrument/mission/observatory specific fields where needed
- https://github.com/nasa-gcn/gcn-schema

JSON example (in development):

```
"$id": "https://github.com/nasa-gcn/gcn-schema/blob/main/gcn/notices/fermi/gbm/Trigger.schema.json",
"$schema": "https://json-schema.org/draft/2020-12/schema",
"title": "Trigger",
"description": "fermi gbm Trigger",
"type": "object",
"properties": {
  "alert info": {
    "$ref": "https://github.com/nasa-gcn/gcn-schema/blob/main/gcn/notices/core/AlertInfo.schema.json"
  },
  "identifiers": {
    "$ref": "https://github.com/nasa-gcn/gcn-schema/blob/main/gcn/notices/core/Identifiers.schema.jsor
  },
  "event info": {
    "Sref" · "https://github.com/pasa_gen/gen_schema/blob/main/gen/potices/core/EventInfo_schema
```

NASA's Time Domain and Multimessenger Vision

Adapted from V. Connaughton's slides

NASA's Physics of the Cosmos (PhysCOS) program is studying the organizational, programmatic, and technical aspects of a future Time-Domain and MultiMessenger (TDAMM) General Observing Facility (GOF). GCN is to play a vital role. The GOF would facilitate:

- On a timescale of **seconds to hours**: alert systems (e.g. **GCN**); information flows between science, mission, and operations; observing schedules and science timelines
- On a timescale of hours to months: coordinated targets of opportunity, coordinated observation planning
- On a timescale of **years**: Strategic coordination of planning, missions, interfaces, and tools.

For more information, contact the study leads, Brian Humensky and Chris Roberts.

Thanks for listening!
